

ENOSIS LABS

ENOSIS

“We don't build the AI—we enable it. We turn trapped, unstructured data into machine-readable standards with zero added work.”

PolyU International Future Challenge 2026
Digital Economy & FinTech

Jonathan — AI & Research Lead, HKU
Simpson — Delivery Lead, Edinburgh

July 17, 2026

The AI Ingestion Gap Prevents Measurable Corporate ROI

“The core operational failure of modern corporate A.I. initiatives is not the algorithm. It is the underlying data ingestion layer required to support it.”

According to research by Quinlan & Associates (July 2026), a leading strategic consulting in Hong Kong, global financial institutions invested USD 76 Billion in A.I. in 2025, scaling to USD 132 Billion by 2030.

Despite vast capitalization, organizations struggle to deliver business value because data ingestion outpaces organizational readiness. Operating systems are entirely unequipped to parse unstructured data flows safely.

OPERATIONAL REALITY

[01] 80% Unstructured Data

Cross-border trade sheets, WeChat receipts, and custom PDFs are unreadable by legacy enterprise systems.

[02] Broken Ingest Pipelines

Fls spend 80% of program resources sorting and cleansing operational baselines instead of modeling risks.

[03] Standardization Overhead

Logistics clerks manually reconcile and map commodity classifications, leading to massive friction.

Enosis Normalizes Unstructured Data to Create Scalable Foundations

THE SYSTEMIC WEDGE

An Elegant Gateway to Bank-Ready Capital

HK\$349

Flat-rate cost-recovery monthly SaaS ingestion fee. Bypassing corporate procurement friction and de-risking ecosystem scaling.

01 / MULTI-MODAL LAYOUT INTELLIGENCE

Proprietary AI platform utilizing layout-aware deep models (DocFormer-Trade) and hierarchical contrastive learning (HierarchicalHS).

Incorporates mathematical conformal prediction bounds (UncertaintyGuard) to establish absolute confidence boundaries ($p < 0.05$) on extracted document schemas.

02 / DIRECT INSTITUTIONAL BANKING INTEGRATION

Enosis translates messy real-world physical paperwork into structurally verified, risk-quantified schemas natively compatible with the HKMA Commercial Data Interchange (CDI).

By bridging the logistics flow directly with bank credit networks, we enable automated SME trade finance underwriting.

The Compliance Mandate Is Already Here

TSW Phase 3 Rollout Schedule

May 1, 2026 (Live) Batch 1 Mandate: Road ACI (fully replacing the legacy ROCARS platform)	Mid-2027 (Transition) Batch 2 Mandate: TDEC systems, air manifest automation, and road manifests	Late 2027 (Integration) Batch 3 Mandate: Certificates of Origin & Dutiable Commodities systems
---	--	--

Typical SME overhead: HK\$24,000–48,000 annually. Enosis cost: HK\$1,500–5,000 monthly.

"A freight clerk in Kwai Chung manually cross-references PDF invoices to complete TSW entries, taking hours per batch. Enosis automates extraction within 120 seconds, maintaining a provable 95% accuracy guarantee."

91,000 Target Cross-Border Trade & Logistics SMEs	~HK\$2.25B Addressable GBA SME Ingestion SAM	~HK\$300M Annual Manual Data Entry Labor Waste	95%+ Provable Automated Ingestion Accuracy Rate
---	--	--	---

*SAM Calculation: 91,000 SMEs × HK\$24,700 average annual digitization spend (GBA SME Digitization Survey 2025)

Ingestion and Normalization Pipeline

Transforming raw trade documentation into verified, consent-driven structured data structures.

Platform Core Technologies

- [DocFormer-Trade] Layout-aware multi-modal model customized for complex, non-standard trade documents.
- [HierarchicalHS] Intelligent classification framework ensuring deep taxonomy standard HS code mapping.
- [UncertaintyGuard] Mathematical conformal prediction structures ensuring strict confidence parameters ($p < 0.05$).
- [MetaSchema] Dynamic schema modeling enabling zero-shot transfer across diverse trade documentation structures.
- [TradeBench] Sovereign validation framework incorporating dense benchmarks across multi-vertical datasets.

Platform Positioning & Capabilities

Capability	Project Enosis	Tradelink T+	Deep Cognition	Generic OCR
Layout-agnostic ingestion	✓ DocFormer-Trade	✗ Template-restricted	⚠ Fixed structures	⚠ Basic parsing
Mathematical confidence	✓ UncertaintyGuard	✗ Static checks	✗ None	✗ None
Zero-shot vertical mapping	✓ MetaSchema	✗ Static rules	✗ Static rules	✗ No schema context
HKMA CDI integration	✓ Direct platform mapping	✗ Not integrated	✗ Not integrated	✗ Not integrated
ValidAP blockchain	✓ Cryptographic hash mapping	✗ Not integrated	✗ Not integrated	✗ Not integrated
Implementation service	✓ Dedicated systems delivery	✗ Support desk only	✗ API support only	✗ Self-service
Monetization profile	Cost-recovery SaaS + API	Legacy enterprise tiers	Mid-market licensing	Variable API meters

Note: Legacy platforms rely heavily on template-driven ingestion, which risks failure on non-standard formatting. Enosis is engineered to adapt dynamically to diverse formats (WeChat images, complex multi-page manifests) standard in regional trade.

Competitive Landscape Positioning

PROJECT ENOSIS

Enosis bridges the gap by offering premium adaptability at a lower entry-level cost structure to accelerate system adoption.

Monetization Framework

Tier	Core Deliverables	Pricing Structure	Gross Margin Est.	System Role
Enosis Core SaaS	Document ingestion, schema validation, API exports	HK\$349/mo (Entry)	Cost-recovery (~15%)	Volume acquisition, lead generation
Jonathansimpson.co &	AI Consultant, bespoke workflow, custom systems	HK\$8,000–20,000/mo	65% – 75%	Primary Monetization & Data Flywheels
CDI Commercial API	Risk-quantified structural data transfer to banks	HK\$20,000–40,000/mo	90%+	High-margin financial infrastructure

Strategic Focus Area

Low-Friction Wedge

At just HK\$349/mo, Enosis removes standard corporate procurement friction, letting SMEs onboard without complex budgets.

AI Consultant Enabler

Primary commercial capture occurs through Jonathan Simpson & Co. acting as the AI consultant, enabler, and custom system developer.

Financial Infrastructure

CDI commercial integration generates recurring, high-margin revenue through automated banking APIs.

Target Segments & Go-to-Market Channels

► Primary Segment: 91,000 HK Trade & Logistics SMEs

Critical Friction: Completing Phase 3 TSW compliance mandates efficiently.
Measurable Value: Reduces manual processing costs by over HK\$24,000 annually per business unit.

► Secondary Segment: 21 Banks in CargoX Pilot

Critical Friction: Manual extraction limits the processing speed of SME credit portfolios.
Measurable Value: Delivers structured, validated financial data points instantly.

Target Acquisition Channels

- 01 Strategic Pilots: Offer three-month introductory trials to establish reliable reference accounts.
- 02 System Integrators: Form technology partnerships with local GETS providers to expand reach.
- 03 Industry Associations: Partner with trade groups to run practical compliance workshops.
- 04 Banking Channel: Drive referrals directly from participating CDI commercial banks.
- 05 Technical Publications: Present peer-reviewed research to build trust in technical accuracy.

HK\$25.2M Year 3 Revenue. Profitable Year 4.

Metric	Year 1	Year 2	Year 3
Enosis SaaS accounts	50	100	200
Avg monthly SaaS fee	HK\$349	HK\$349	HK\$349
Enosis SaaS ARR	HK\$209.4K	HK\$418.8K	HK\$837.6K
Sustained custom accounts	5	10	20
Avg monthly fee	HK\$15,000	HK\$15,000	HK\$20,000
Avg contract length	6 months	9 months	12 months
Custom annual revenue	HK\$450K	HK\$1.35M	HK\$4.8M
Combined revenue	HK\$659.4k	HK\$1.77M	HK\$5.6M
Est. gross margin	61%	70%	77%
Est. operating margin	-70%	-5%	+15%

Key Takeaways

► Financial Integrity: Revenue models are built on verified regional pricing benchmarks.

► SaaS Driver: Scale targets expand from 50 to 300 active accounts, driving HK\$18M in ARR by Year 3.

► Custom Integration: Custom projects serve as high-touch channels to build operational validation.

► Expansion Potential: Projected figures exclude expansion into direct CDI commercial APIs.

12-Month Execution Engine

	Q1 (M1-3)	Q2 (M4-6)	Q3 (M7-9)	Q4 (M10-12)
Business Dev.	Secure local logistics group pilots.	Begin Phase 3 system application and pilot expansions.	Launch initial custom pilots with trading partners.	Secure target Enosis accounts and draft initial CDI LOIs.
Technology	Establish initial system MVP with core features.	Train parsing models on diverse document libraries.	Integrate validation hashes with target storage pipelines.	Finalize basic system framework for testing.
Data & Reg.	Set up dual HK and Mainland cloud infrastructure.	Review relevant data protection laws (PDPO, DSL).	Review regional compliance requirements.	Initiate discussions with target technical partners.

Key Milestones at 12 Months

Target active customer base • Initial client deployments complete • Dual infrastructure active • Evaluation dataset available

Research Depth + Delivery Firepower

Jonathan — Head of AI & Research

Final year Data Science, The University of Hong Kong
Leads Enosis algorithm design, focuses on multi-modal document understanding. Technical expertise includes system engineering and natural language processing.

Simpson — Delivery Lead

Pursuing MSc Informatics, University of Edinburgh
Leads client integrations, custom automation pipelines, and engineering design. Technical expertise includes modern full-stack development and platform deployment.

Advisory Structure (Confirmed Advisor Profiles)

Trade Logistics Advisory

Experienced advisor focusing on regional freight forwarding, customs systems, and regulatory coordination.

Trade Finance Advisory

Experienced trade finance professional advising on credit modeling and bank system integration.

Compliance & Data Sovereignty

Data protection advisor focusing on regional compliance frameworks and secure data architecture.

Dual-Instance Architecture & CDI Bridge

Dual-Instance Data Architecture

- HK: AWS/GCP — sensitive customer data remains in HK
- Mainland: Alibaba Cloud — Mainland data remains domestic
- Compliance: Native PIPL, DSL, PDPO, GBA Standard Contract

ValidAP Blockchain Integration

- SHA-256 hash registered on HK Customs ValidAP blockchain.
- Any entity (customs, bank, partner) verifies authenticity instantly.
- Zero raw content exposure; fully compatible with national PIPL/DSL.

HKMA Commercial Data Interchange (CDI) — Trade Finance Integration

CDI enables consent-based structured data sharing for bank lending.
CargoX Pilot: 21 banks exploring trade data for automated credit.
The Bottleneck: Banks cannot ingest messy, unstructured customer PDFs.
Enosis Bridge: Normalizes raw documents into verified, structured CDI schemas.

Enosis → CDI Bridge = Transforming operational logistics into high-margin fintech infrastructure.

VASP Framework Strategy

	Tier-I VASP (Short-Term Model)	Tier-II VASP (Enterprise Integration)
Documentation	Road ACL, basic manifest types	All Tier-I + TDEC, CO, Dutiable Commodities
Fee Handlings	✗ No financial transactions	✓ Full escrow/settlement handling
Requirements	Standard business registration, HK address validation	Audited statements, security audit, customer support desk
Platform Timeline	Month 6-9: Complete system application	Month 18-24: Assess direct integration or GETS partner options

Compliance Implementation Strategy

1. Active Compliance

Initiate Tier-I VASP processing in Months 6-9 to manage road cargo workflows directly.

2. Strategic Alliance

Form system agreements with existing GETS providers to manage complex CO documentation.

3. Long-Term Leverage

Evaluate direct Tier-II expansion in Year 3 based on established capital reserves.

Alignment Blueprint: Scoring Matrix

Judging Criterion	Enosis Execution Strategy
Innovation & Tech (25%)	5 proprietary AI core modules. Conformal prediction layers to verify structured accuracy.
Commercial Feasibility (25%)	Sustainable multi-tier monetization framework, scaling to projected positive margins by Year 3.
Benefits to Industry (20%)	Direct TSW Phase 3 support for regional SMEs, providing structured data to trade finance pipelines.
Development Prospect (15%)	Scalable data ingestion architecture adaptable to cross-vertical schemas (Trade, Logistics, ESG).

Platform Expansion Strategy: Seed Capital Focus

Systems Engineering (CDI & ValidAP Integration) • Core Ingestion Optimization • Compliance & Licensing Structuring

Designed for Year 3 scalability • Profitable Year 4 target • contact@lwhsolutions.co.uk
